Vedant Tule

Kutch, Gujarat | 7874404555 | tulevedant@gmail.com | LinkedIn | GitHub | Portfolio

SUMMARY

B.Tech student in Computer Science and Engineering (AI & ML) with a foundation in data analytics, machine learning, and predictive modelling. Experienced in data pre-processing, exploratory data analysis, feature selection, and model evaluation using Python and SQL. Analytical and detail-oriented, with an interest in translating data-driven findings into actionable business insights.

EDUCATION

Vellore Institute of Technology, Bhopal — September 2023 – May 2027
B.Tech in Computer Science and Engineering (Artificial Intelligence and Machine Learning) — CGPA: 8.40

Atmiya Vidyapeeth — March 2022 – May 2023
Class 12th, CBSE – Physics, Chemistry, Mathematics — Percentage: 83.8%

TECHNICAL SKILLS

Programming : Python, C++, Java, SQL
Machine Learning & AI : Machine Learning techniques, Deep Learning, Scikit-learn, XGBoost, Generative AI (GenAI), Large Language Models (LLMs)
Data Analytics & Databases : MySQL, Pandas, NumPy, Matplotlib, Microsoft Excel, Exploratory Data Analysis (EDA), Data Preprocessing, Feature Selection
Tools & Platforms : Git, GitHub, Jupyter Notebook, Amazon Web Services (AWS)

EXPERIENCE

MPOnline Limited
AI/ML Intern
- Developed Python-based machine learning solutions involving data preprocessing, model development, and performance evaluation, applying ML techniques to real-world datasets.

MPOnline Limited
Advanced Software Engineering and Development Intern
- Developed a full-stack Library Management System using HTML, CSS, JavaScript, Python, and MySQL, implementing employee management, task assignment, and completion tracking.

PROJECTS

Customer Churn Prediction using Machine Learning | GitHub — June 2026 – July 2026
- Built a classification model to predict telecom customer churn using a dataset of 7,000+ customer records, identifying key drivers behind a 26.5% churn rate.
- Performed exploratory data analysis, treated missing values, and applied feature selection (correlation analysis, RFE, Random Forest importance) to isolate the most impactful churn predictors.
- Compared Decision Tree and SVM models across feature sets, then fine-tuned the best model using GridSearchCV, achieving 79% accuracy and 0.81 ROC-AUC to support data-driven retention decisions.

HydroSense – AI Crop Advisor | GitHub — January 2026 – April 2026
- Developed and trained an XGBoost classification model for crop recommendation using environmental sensor data.
- Integrated the trained model into the application's backend inference pipeline to generate crop recommendations, collaborating with the team on model testing and validation.

CERTIFICATIONS

- **Applied Machine Learning in Python** – University of Michigan
- **OCI Data Science** – Oracle Cloud Infrastructure
- **Google Cloud Generative AI** – Google (GCP)
- **Cloud Computing** – NPTEL
